

# W01-P1: Create 8 same books with css booklist and book

The image shows a development environment with Visual Studio Code on the left and a web browser on the right. The Visual Studio Code editor displays the following code:

```
1 import './App.css';
2
3 const App = () => {
4   return (
5     <section className="booklist">
6       <Book />
7       <Book />
8       <Book />
9       <Book />
10      <Book />
11      <Book />
12      <Book />
13    </section>
14  );
15 }
16
17 export default App;
18
19 const Book = () => {
20   return (
21     <article className="book">
22       
23       <h1>The Saints of Swallow Hill: A Fascinating Depression Era
24       <h4>Donna Everhart</h4>
25     </article>
26   );
27 }
28
29 export default Book;
```

The web browser shows the rendered output at localhost:3000, displaying a grid of 8 book cards. The CSS code in the browser's developer tools is as follows:

```
body {
  font-family: sans-serif;
  background-color: #f0f0f0;
}

section.booklist {
  display: grid;
  grid-template-columns: repeat(3, 1fr);
  gap: 10px;
}

article.book {
  width: 90px;
  height: 110px;
  margin: 5px auto;
  display: grid;
  gap: 2px;
}
```
